

# GINGICaine® Fusion TESTIMONIALS

20% BENZOCAINE WITH 2% HEMP EXTRACT

My hygienist uses the product routinely and says it works well. It lasts as long as she needs it to and makes her patients significantly more comfortable during scaling. I've found it particularly useful for implant restoration. It allows me to avoid injectable anesthetic and keep the patient comfortable while placing scan posts, impression copings as well as implant restorations.

Helen K. Lester  
DDS, FAGD, PC  
Eugene, Oregon

It's very effective. It has a fast onset, is long lasting and is anti-inflammatory. The applicator can be used in the anterior just fine, but in the posterior, a Q-tip is still the best method as tongues can displace the material very quickly.

Dr. John Kanca, III  
Middlebury, Connecticut

Dr. Kanca completed his undergraduate studies at the University of Connecticut and received his DMD at their School of Dental Medicine. He is a founding member and was the 4th President of the American Academy of Cosmetic Dentistry. He is also a part of the American Dental Association as well as the Connecticut State Dental Association.

I highly recommend using these two products that I have personally used on myself and on patients. The jars are perfect to use prior to local anesthesia. My patients love the strawberry flavor and that there's no aftertaste. It has fast pain relief and high viscosity as well. The 2% hemp extract also provides anti-inflammatory and analgesic benefits.

Cathy Portwood  
RDH, CDT  
Selma, Alabama

GINGICaine Fusion is where nature meets science. Key features are how long it lasts and how easy it is to apply. The applicator's rounded tip for non-traumatic application is very well engineered. This is definitely a next step in topical anesthesia.

Frances Horning

Millburn, NJ

Frances Horning is a public speaker, coach, consultant, and instructor for Integrative Perio Solutions LLC, KT Seminars LLC, and the International Academy of Biological Dentistry and Medicine. She also holds a seat on the board of the International Academy of Biological Dentistry and Medicine and is also their Social Media Director. In addition, she is the Qualitative Director at the Holistic Dental Center of Millburn, NJ.

The GINGICaine Fusion is a game changer. In Texas, hygienists cannot administer local anesthesia. This results in me having to anesthetize patients when they come in for scaling and root planing. The gel has been a very useful tool and allows my hygienist to administer anesthesia without injection and keeps the patient comfortable during the whole procedure. I do a lot of oral appliances. Occasional gingival irritation occurs and the GINGICaine Fusion is excellent for this as well as canker sores and aphthous ulcers. It is also excellent for application prior to palatal injections. I would recommend this product to any dentist.

Hal Stewart  
DDS, FACD  
Texas

Dr. Hal Stewart has a longstanding commitment to the highest standards of general, cosmetic and reconstructive dentistry. He is one of fewer than 200 dentists worldwide to have completed the entire curriculum of the Orognathic Bioesthetics International (OBI) Foundation and teaches at the OBI Institute. Dr. Stewart is the CEO of The Stewart Center. He also lectures extensively, teaching dentists around the world about advanced restorative and cosmetic dentistry.

My team and I provide comprehensive dental care to nursing home residents. Many cannot tolerate dental injections due to medical complications, so the GINGICaine Fusion is a great substitution. We used this product on three residents that required scaling and root planing. Each patient was comfortable and handled the procedure well. The patients liked the taste and it was very fast acting. There was no redness or irritation either. We also used it on a resident that had a sore under his ill-fitting denture; he received immediate relief while the dentist did a soft reline. I highly recommend GINGICaine Fusion.

Sonya Dunbar

GINGICaine Fusion is wonderful - it does exactly what it says it will do. My hygienists love it. Using this topical anesthetic has increased productivity in our office by approximately 20% and therefore my team is happy. This results in my own time being more productive as well. Thank you, Gingi-Pak!
